DETAILED ACTION

This application is a 371 of PCT/JP04/12508.

The preliminary amendment filed on March 7, 2006, amending claims 5 and 9-11 and adding claims 12-18, has been entered.

Claims 1-18 are pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-2 and 4, drawn to a modified PQQGDH.

Group II, claim(s) 3, drawn to a method of enhancing a specific activity in an assay system by modifying a PQQGDH.

Group III, claim(s) 5-8 and 12-15, drawn to a polynucleotide encoding the modified PQQGDH of Group I, vector comprising said polynucleotide, host cell transformed with said vector and a method of producing said modified PQQGDH.

Group IV, claim(s) 9-10 and 16-17, drawn to a glucose assay kit/glucose sensor comprising the modified PQQGDH of Group I.

Group V, claim(s) 11 and 18, drawn to a method of measuring glucose using the modified PQQGDH of Group I.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-V appears to be that they all relate to a modified PQQGDH.

However, Sode et al. (US Patent NO. 6,103,509 – form PTO-892) discloses a modified PQQGDH.

Therefore, the technical feature linking the inventions of Groups I-V does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

The special technical feature of Group I is to a modified PQQGDH.

The special technical feature of Group II is a method of enhancing a specific activity in an assay system by modifying a PQQGDH.

The special technical feature of Group III is a polynucleotide encoding the modified PQQGDH of Group I, vector comprising said polynucleotide, host cell transformed with said vector and a method of producing said modified PQQGDH.

The special technical feature of Group IV is a glucose assay kit/glucose sensor comprising a modified PQQGDH.

The special technical feature of Group V is a method of measuring glucose using a modified PQQGDH.

Accordingly, Groups I-V are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
